DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 15-37 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 15-25 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 15 recited a graphic display editor which fails to fall within one of the four statutory categories of subject matter of a process, machine, manufacture or composition of matter and therefore is non-statutory subject matter.

 Claims 26-37 are rejected under 35 U.S.C. 101 because the claimed invention is not supported by either a specific and substantial asserted utility or a well established utility.

Claims 26-37 recite a graphical display, which would fall under the statutory category of a machine, however the claims are directed to a process and therefore not supported by a specific and substantial asserted utility.

Claims 26-37 are also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a specific and substantial asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- Claims 1, 8-15, 20-26 and 32-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Resnick et al., U.S. Patent Number 7,086,009 B2.

Regarding claim 1, Resnick discloses a display entity for use in presenting a visual depiction of a process entity of a process plant to a user on a display device (figure 11), the display entity comprising: a computer readable memory (PC 100 and 102, it is inherent that PC's have computer readable memory); and, a display object stored on the computer readable memory and adapted to be executed on a processor (col. 7, lines 30-48), the display object including: a property memory adapted to store a value of a property associated with the process entity(col. 11, lines 29-67); a graphic representation of the process entity adapted to be displayed to a user on a display device when the display object is executed on a processor (col. 12, lines 5-11); a definition routine adapted to enable a user to define a routine that operates in conjunction with the visual representation of one of the graphic objects and the property during execution of the graphic display (col. 29, line 61- col. 30, line 26); and a routine

Art Unit: 2628

that operates in conjunction with the graphic representation of the process entity displayed to the user and that is associated with the value of the property (col. 30, line 50 – col. 31, line 16).

Regarding claim 8, Resnick et al. discloses reference that connects a property value to a data source within the process plant (figures 12-20).

Regarding claims 9, 20, 32, Resnick et al. disclose the routine is an executable routine that transforms the property value from the data source within the process plant (figure 10, which shows a process plant with fill bins and alerts to alarming conditions, which Examiner interprets as an executable routine that transforms, i.e. fills the property value).

Regarding claims 10, 21, 33, Resnick et al. discloses transforming the property value to a duration (Column 21, lines 23-28, transforming the property value to a duration of a fill bin).

Regarding claims 11, 22, 34, Resnick et al. discloses detecting a condition with a change in graphic presentation. (Column 11, lines 61-64, alarm information).

Art Unit: 2628

Regarding claims 12, 23, 35, Resnick et al. discloses the detected condition relates to a communication status (col. 11, line 60, information gathering, which Examiner interprets as a communication status).

Regarding claims 13, 24, 36, Resnick et al. discloses user input from the user via graphic visualization (col. 8, lines 40-43).

Regarding claims 14, 25, 37, Resnick et al. discloses the executable routine uses the input to cause a change to the property value to effect a runtime environment exterior to the display entity (col. 14, lines 22-34).

Regarding claim 15, it is rejected based upon similar rational as above claim 1.

Resnick et al. also discloses a library of graphic objects, each graphic object including a visual representation of a physical or a local entity within the process plant (Fig. 10), a graphically based editor canvas routine that enables a user to define an executable graphic display by placing one or more visual representations of the graphic objects from the library of graphic objects onto an edit-canvas to define a manner in which the one or more visual representations of the graphic objects will be displayed on a display device to a user during execution of the graphic display (base object editor 2034), a property definition canvas routine adapted to enable a user to define a property associated with at least one of the plurality of graphic objects (interface definitions 2002); a binding definition routine adapted to enable a user to specify a binding

Art Unit: 2628

between the property and a runtime environment within the process plant (interface definition 2002).

Regarding claim 26, it is rejected based upon similar rational as claim 1 above.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 2-7, 16-19, 27-31 rejected under 35 U.S.C. 103(a) as being unpatentable over Resnick et al., U.S. Patent Number 7,086,009 B2, in view of Joseph et al., U.S. Patent Number 5.485.600.

Regarding claims 2, 16, 27, it is noted that Resnick et al. does not explicitly disclose an animation routine that animates the graphic representations. However, Joseph et al. discloses an animation routine that animates the graphic representations in response to changes in data values (Column 7, lines 50-55). It would have been obvious to one of ordinary skill to combine the animation of Joseph et al. with the graphic representation of Resnick et al. with the motivation of dynamic control systems and easily know the status of a device.

Art Unit: 2628

Regarding claims 3, 17, 28, Joseph et al. discloses animation routine animates the graphic representation in a continuous manner (Column 15, lines 7-14, drawing the objects and redrawing the virtual objects at run time, which Examiner interprets as continuous manner).

Regarding claims 4, 18, 29, it is noted that Resnick et al. does not disclose the animation routine applying at least one of a skew, rotation, a translation and resizing to the graphic representation. However, Joseph et al. discloses animation routine applying at least one of a skew, rotation, a translation and resizing to the graphic representation. (Column 7, lines 43-50). It would have been obvious to one of ordinary skill to combine the animation of Joseph et al. with the graphic representation of Resnick et al. with the motivation of dynamic control systems and easily know the status of a device.

Regarding claims 5, 19, 30, it is noted that Resnick et al. does not disclose the animation routine applying at least one a color animation, or a color gradient animation, or an opacity animation, or a font characteristic animation, or a video property the graphic representation. However, Joseph et al. discloses animation routine applying at least one a color animation, or a color gradient animation, or an opacity animation, or a font characteristic animation, or a video property the graphic representation (Column 7, lines 43-50). It would have been obvious to one of ordinary skill to combine the animation of Joseph et al. with the graphic representation of Resnick et al. with the motivation of dynamic control systems and easily know the status of a device.

Art Unit: 2628

Regarding claims 6 and 31, it is noted that Resnick et al does not explicitly disclose the graphic representation includes two or more primitives and wherein the routine changes a property of one of the primitives. However Joseph et al. discloses graphic representation includes two or more primitives (Fig. 29) and wherein the routine changes a property of one of the primitives (Column 19, lines 32-39). It would have been obvious to one of ordinary skill to combine the graphical representation of Resnick with the multiple graphic primitives with a routine which changes a property of a graphic primitive of Joseph et al with the motivation of having a multitude of different controls in a process system.

Regarding claim 7, Resnick discloses the property of one of the primitives is a fill property (figures 10 and 11).

Response to Arguments

 Applicant's arguments with respect to claims 1-37 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M GOOD JOHNSON whose telephone number is (571)272-7658. The examiner can normally be reached on Monday-Friday 8-4:30 pm.

Application/Control Number: 10/589,845 Page 9

Art Unit: 2628

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kee Tung can be reached on (571) 272-7794. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
